17. CONFLICT OF INTEREST

17.1 A Bidder must not, and must ensure that its officers, employees, agents and advisors do not place themselves in a position that may give rise to actual, potential or perceived conflict of interest between the interests of the DBSA and the Bidder’s interests during the Tender Process.

17.2 The Bidder is required to provide details of any interests, relationships or clients which may or do give rise to a conflict of interest in relation to the supply of the services under any contract that may result from this RFP. If the Bidder submits its Bid and a subsequent conflict of interest arises, or is likely to arise, which was not disclosed in the Bid, the Bidder must notify the DBSA immediately in writing of that conflict.

17.3 The DBSA may immediately disqualify a Bidder from the Tendering Process if the Bidder fails to notify the DBSA of the conflict as required.
18. LATE BIDS

18.1 Bids must be delivered by the Closing Time. The Closing Time may be extended by the DBSA in its absolute discretion by providing written notice to Bidders.

18.2 Bids delivered after the Closing Time or lodged at a location or in a manner that is contrary to that specified in this RFP will be disqualified from the Tendering Process and will be ineligible for consideration. However, a late Bid may be accepted where the Bidder can clearly demonstrate (to the satisfaction of the DBSA, in its sole discretion) that late lodgement of the Bid was caused by the DBSA; that access was denied or hindered in relation to the physical tender box; or that a major/critical incident hindered the delivery of the Bid and, in all cases, that the integrity of the Tendering Process will not be compromised by accepting a Bid after the Closing Time.

18.3 The determination of the DBSA as to the actual time that a Bid is lodged is final. Subject to clause 18.2, all Bids lodged after the Closing Time will be recorded by the DBSA and will only be opened for the purposes of identifying a business name and address of the Bidder. The DBSA will inform a Bidder whose Bid was lodged after the Closing Time of its ineligibility for consideration. The general operating practice is for the late Bid to be returned within 5 (five) working days of receipt or within 5 (five) working days after determination not to accept a late Bid.

19. BIDDER’S RESPONSIBILITIES

21. ILLEGIBLE CONTENT, ALTERATION AND ERASURES

21.1 Incomplete Bids may be disqualified or evaluated solely on information contained in the Bid.

21.3 The DBSA may permit a Bidder to correct an unintentional error in its Bid where that error becomes known or apparent after the Closing Time, but in no event will any correction be permitted if the DBSA reasonably considers that the correction would materially alter the substance of the Bid or effect the fairness of the Tendering Process.

22. OBLIGATION TO NOTIFY ERRORS

If, after a Bidder’s Response has been submitted, the Bidder becomes aware of an error in the Bidders Response (including an error in pricing, but excluding clerical errors which would have no bearing on the evaluation of the Bid), the Bidder must promptly notify the DBSA of such error.

23. RESPONSIBILITY FOR BIDDING COSTS

23.1 The Bidders participation or involvement in any stage of the Tendering Process is at the Bidders sole risk, cost and expense. The DBSA will not be held responsible for, or pay for, any expense or loss that may be incurred by Bidders in relation to the preparation or lodgement of their Bid.

Price points 80
Preferential procurement points 20

27.2.2 **Price points**

\[ Ps = 80(1-(Pt-Pmin)/Pmin) \]

Where:
Ps = Points scored for comparative price of tender or offer under consideration;
Pt = Comparative price of tender or offer under consideration; and
Pmin = Comparative price of lowest acceptable tender or offer.

27.2.3 Preferential procurement points
A maximum of 20 points may be awarded in respect of preferential procurement, which points must be awarded to a tenderer for attaining their B-BBEE Status Level in accordance with the table below:

<table>
<thead>

An unincorporated trust, consortium or joint venture will qualify for points for their B-BBEE status level as an unincorporated entity, provided that the entity submits their consolidated B-BBEE scorecard as if they were a group structure and that such a consolidated B-BBEE scorecard is prepared for every separate Bid.

27.2.4 Total

The successful Bidder will be the Bidder which has the highest total points (out of 100) for both price and preferential procurement (unless there is a basis for selecting a different successful Bidder in accordance with section 2(1)(f) of the PPPFA).

NB: Bidders are required to submit, as Annexure J to their Bids, any documentation which supports the responses provided in respect of the Eligibility Criteria below.

COVID -19 INFRASTRUCTURE INTERVENTIONS PROGRAMME

TERMS OF REFERENCE (ToR) AND SCOPE OF WORK (SOW) FOR THE PROCUREMENT OF SERVICE PROVIDERS (SPs)

EASTERN CAPE
1. INTRODUCTION

In recognition of the magnitude and severity of the COVID-19 outbreak which has been declared a global pandemic by the World Health Organisation (WHO), Cabinet in its special Cabinet meeting held on 15 March 2020 resolved to declare a national state of disaster. In this regard, the minister of COGTA issued a gazette declaring a State of disaster, in terms of Section 27 of the Disaster Management Act, 2002.

Further, the President of the Republic of South Africa addressed the nation and announced extra ordinary measures to be implemented to mitigate and combat the spread of Covid-19.

The Local Government sphere is at the coalface of the impact of Covid-19 and in this regard a Sectoral Local Government Programme is proposed covering those critical areas that municipalities can contribute in to contain and reverse the spread of the pandemic.

The Department of Cooperative Governance, and Water and Sanitation worked together to identify short comings in the hotspots areas to break the Covid -19 pandemic chain. The proposed interventions focus on the provision of basic services, water services infrastructure, i.e. water supply, sanitation, hygiene awareness and electricity.

The DBSA has responded to the national call to assist Government to deliver services to the most disadvantaged communities during these trying times.

2. BACKGROUND

There are areas around the country that are highly densified and are not receiving adequate water and sanitation services and these are the areas that have been identified for urgent intervention to reduce possible spread of the virus. These areas are regarded as municipal hot spots and are characterised by:

- Poor access to basic services, such as electricity, water, sanitation, and solid waste removal
- Unreliable or dysfunctional infrastructure for the provision of water and sanitation services
- Poverty and poor socio-economic conditions
- Public spaces, such as taxi ranks, bus stations, and pension pay-out points do not have access to water and proper sanitation services
Top Intervention areas identified

In order to combat the spread of COVID-19 in the identified areas, COGTA (through MISA) in collaboration with DWS, provinces and municipalities have identified the following interventions:

- Water carting/tankering and storage tanks
- Mobile water treatment package technologies/plants
- Rehabilitation and protection of water sources, e.g. springs
- Drilling, equipping and refurbishment of boreholes as well as ensuring water quality compliance) (SANS 205):
  - Drilling, equipping and refurbishment of boreholes to provide potable water and
  - Monitoring of water quality to ensure adherence to minimum standards
- Repairs and installation of water mains, pump stations and repairs.
- Refurbishment and upgrade of Water Treatment Works and Waste Water Treatment Works
- Improve household sanitation
- Explore alternative technologies for both water and sanitation, including installation of modular packages where necessary
- Social facilitation and awareness campaigns associated with implementation of infrastructure projects
- Hygiene awareness in vulnerable communities and public spaces, as a preventative measure to reduce the transmission of COVID-19. This will include distribution of household hygiene packages (to approximately 325 000 households) and public hygiene packages.

Hygiene awareness campaigns are earmarked for the following high risks areas:

- Informal settlements
- High-density areas
- Areas without access to water
- Areas with high numbers of confirmed infections
- Communal spaces in high poverty level areas
- Areas without adequate solid waste management
3. OBJECTIVE

It is expected that the DBSA’s support with the implementation of some of these interventions will address some of the North West, Limpopo, Mpumalanga and Free State Provinces shortcomings. The details on the projects is indicated on the scope of work.

A detailed analysis of the priority service delivery areas per province, per district, per municipality and per town/village, is provided in the Table below.

In addition, operations and maintenance of sanitation are required facilities (chemical toilets) are required on a regularly basis (daily) to promote healthy and hygienic environments, areas and communities. This is a fair balance between the drought interventions for areas of water insecurity and to address the immediate COVID 19 interventions.

4. TIME FRAME

It is expected timelines for this programme will be dependent on the type of intervention to undertaken in the implementation of the short-term interventions identified. The project durations are stated under the relevant project Scope of work.

5. SCOPE OF WORKS (SOW)

In order to support the communities in the identified hot spot areas, the scope of work for the programme needs to be undertaken to mitigate:

- High shortage of drinking water i.e. provide water tankers, Boreholes and water storages.
- High number of dysfunctional boreholes due to poor maintenance and vandalism.

9. MUNICIPALITIES BACKGROUNDs

MUNICIPALITY 1: ELUNDINI LOCAL MUNICIPALITY

Elundini Local Municipality (ELM) is located within the Joe Gqabi District in the north-eastern portion of the Eastern Cape province. The municipality is bounded by Lesotho and Senqu Municipality in the west, Chris Hani District Municipality in the south, OR Tambo District Municipality in the east and Alfred Nzo District Municipality in the north.

The ELM is one of the most scenic and attractive areas of the province, with considerable potential lying in its deep, fertile soils and high rainfall. Compared to the other municipalities in the Joe Gqabi District, Elundini has prospects of significant growth and upliftment in the quality of life for its residents due to its relative abundance of natural resources. The urban areas and commercial farming district are the highest employers, where people have found employment in the agriculture, commercial and service sectors. There are very low levels of employment in the rural settlements.

This can be partly attributed to the fact that these areas do not have a strong economic base, and partly to the fact that most inhabitants are involved in subsistence-related activities with little surplus being produced for economic profit. Due to the migrant system in operation in South Africa, the impact of recessionary downturns in the economy elsewhere (such as in the mining industry, Gauteng and Cape Town) have had an impact on the Elundini area. There is still a heavy reliance on income from migrant sources.

MUNICIPALITY 2: NYANDENI LOCAL MUNICIPALITY

The Nyandeni Local Municipality is a Category B municipality located within the OR Tambo District in the Eastern Cape Province. It is bordered in the north by Mhlontlo, in the south by the Indian Ocean, in the east by Port St Johns, and in the west by King Sabata Dalindyebo. It is one of five municipalities in the district, making up almost a quarter of its geographical area. It is situated approximately 30km south of Mthatha and 50km north of Port St Johns, and is bordered by a 20km stretch of the coastal belt on the eastern part and Umzimvubu River on the western part.
MUNICIPALITY 3: INGUQUZA LOCAL MUNICIPALITY

Ingquza Hill Local Municipality is one of five local municipalities which fall within the jurisdiction of the OR Tambo District Municipality of the Eastern Cape Province. Ingquza Hill is located to the north west of the OR Tambo District and was established through the amalgamation of the former Lusikisiki and Flagstaff Transitional Local Councils and the surrounding rural areas, which fell under the Transitional Representative Councils. The seat of the Municipality is in Lusikisiki and the municipal area is divided into 32 wards. The Municipality is faced with enormous challenges relating to huge backlogs in infrastructure, high levels of poverty and underdevelopment. The fact that the municipality is poor demands targeted community focused development planning that addresses poverty and builds a firm foundation for the creation of a thriving and sustainable community.

9.1. **SCOPE OF WORK**

DRILLING AND EQUIPPING OF BOREHOLES:

i. **METHODOLOGY AND SPECIFICATIONS**

Based on the proposed groundwater Programme the following methodologies will be employed.

a) **Preliminary and General**

For work to be executed by the Contractor and Quality control test, Establishment of facilities on site and the De-establishment of facilities on site. Leaving the site with only the Infrastructure and no debris. This shall include traveling to the bore hole points during construction.

b) **Hydrogeological Survey**

➢ **Site Assessment and Desk Study**

   Existing borehole information from in-house database and previous studies conducted by the municipality within the defined project area will be assessed to compare yields,
water levels and water quality in order to determine whether the aquifers are stable or deteriorating. Aerial photos and other data obtained from previous groundwater investigations will be studied and extrapolated to identify geological structures such as dykes, faults and lineaments that can be used for water balances sheet.

➢ **Siting**

The boreholes will be installed within the Towns/Villages indicated in Table 1 above. The appointed Service Provider will be required to use available and appropriate methods to site a borehole to ensure that it produces adequate yield. The decision to drill more than one borehole will depend on the yield of the first borehole. The location of boreholes, should more than one be required, must be at least 30-50 m away from a potential pollution source such as on-site toilets, cattle kraals or cemeteries, but as close to the village as possible.

➢ **Hydro-census**

Borehole verification within a 1 km radius of the identified location will be conducted to verify the use of groundwater in the area. Existing boreholes and springs in the defined areas will be the direction of groundwater in the area.

- **Geophysical Investigation**

A geophysical survey must be conducted to identify and accurately position any structural features and lithology changes which could influence groundwater movement. The geophysical survey to accurately define the positions of structural features, weathering zones and other features of significance to groundwater occurrence will comprise Electro Magnetic 34(EM-34) and magnetic profiling supported by Vertical Electrical Resistivity Soundings (VES) if required. The survey will assist in selecting sites for the drilling of groundwater boreholes.

A proton precision magnetometer (G-856 Memory-Mag.) manufactured by Geometrics will be used for the magnetic surveys as well as EM 34 manufactured by Geonic. The Magnetic and EM survey method are useful in identifying intrusive dykes and geological contact zones. A station spacing of 10 m will be used during the survey. Data from the magnetic survey will be processed and presented as profiles using spread sheets (MS Office Excel).
The magnetic traversing will be done using a proton fluid magnetometer, the magnetic survey will be run in conjunction with the EM-34 survey.

- **Drilling Supervision/ Testing Supervision**

  The Hydrogeological service will include the supervision of the drilling and advise the municipality and MISA on the possibility of striking water of an expectable yield. Also included will be the supervision of the yield test to confirm the sustainable yield of the borehole.

- **Drilling of Production Borehole**

  - Only one borehole will be equipped and be at least 165 mm in diameter. The municipality and MISA together with the Service Provider, to ensure and secure a sustainable yield borehole.
  - A total of 350 m of drilling will be accepted in order to strike water. This can potentially be spread over three boreholes, depending on whether water has been obtained or not. MISA together with the driller, will decide to stop drilling, and equip or move to the next site. No borehole should be deeper than 150 m.
  - The Drilling Contractor will only be paid for meters drilled and meters of casing installed in the borehole.
  - All groundwater boreholes will be drilled in order to facilitate aquifer parameter testing and groundwater sampling. The borehole will be drilled using down the hole air percussion equipment.
  - The drilling will be drilled according but not limited to the DWS minimum standards and guidelines:
    - a) The development of a production boreholes shall entail hydrogeological investigations, siting, drilling of new boreholes, and test pumping.
    - b) The Municipality and MISA will inform the service provider based on the yield test and water quality which borehole to equip.
    - c) The Borehole development shall further entail the removal of drilling fines from aquifer pores, removal of drilling foam/mud, and establishing a gravel pack filter around the borehole-aquifer interface.
    - d) Borehole development method for use shall be determined by the hydrogeological investigation’s recommendations.
    - e) The Borehole diameter shall be determined by the findings of the hydrogeological investigations and site conditions, but not smaller than 165
mm.

- All installations shall make use of a SOLAR electricity supply system and any alternate method of energy supply must be approved by the municipality and MISA. The selection of the SOLAR pump type and capacity shall be based on:

  a) Maximum required/available capacity and safe yield  
  b) Total pumping head  
  c) Maximum pumping rate feasible

- The borehole is to be fully screened (from the water table to bedrock) with a 0.5 m sump. A fine screen (5 mm long and 0.6 mm wide) is to be used to prevent sediment entry into the borehole and fine gravel pack is to be installed in the borehole annulus around the screen. The size of the gravel pack particles should be larger than slot/screen sizes. A bentonite pellet seal is to be installed above the depth at which the water table occurs. The borehole should be sleeved all the way.

➢ **Pump Test of the Production Borehole**

Only the borehole agreed between the Municipality and MISA and the Driller, will be subjected to aquifer testing. This will be done with the aid of positive displacement pumps, and it will entail step drawdown test to determine borehole efficiencies and constant rate test to determine the aquifer parameters and yield estimates. It is anticipated that a 24 to 48-hour constant discharge tests will be done in the respective boreholes.

- Step Tests

Step drawdown tests will be performed to more clearly define the optimum yield at which the constant discharge test can be run. The tests will involve pumping the agreed boreholes at four sequentially higher pumping rates each maintained for an equal length of time, generally not less than 60 minutes. The magnitude of drawdown of the water level in the borehole in response to each of these pumping rates will be measured and recorded on a time schedule as well as the actual pumping rate maintained during each step.
• Constant Discharge Tests

Once the step drawdown tests have been completed the agreed borehole will be subjected to a constant discharge test over 24 to 48 hours in order to obtain aquifer parameters such as transmissivity and Distribution.

The constant discharge tests will be performed to assess the productivity of the aquifer according to its response to the abstraction of water. This response can be analyzed to provide information in regard to the hydraulic properties of the aquifer. These tests will require the boreholes to be pumped at a single pumping rate which is kept constant for the duration of the test. The pumping rates will be set at yields which will be considered to be sustainable for the duration of the tests. The drawdown in water level in the boreholes will be measured during the course of the tests and recorded against a time schedule. Should there be any boreholes within close proximity to pumped borehole, the drawdown in water level will be measured and recorded on the same time schedule as the pumped borehole. Water level measurements will be recorded during the recovery period following the end of pumping of the agreed borehole.

➢ Borehole water Sampling

A borehole water sample must be collected from the tested borehole at the end of pumping test exercise in order to obtain a representative elementary volume of the aquifer.

These samples must be submitted to an accredited analytical laboratory for the analyses of major cation and anion distribution, pH, electrical conductivity, total alkalinity and the water quality be classified according DWA Drinking Standards as well as SANS 241-1:2015.

If treatment is required, see “Water Purification Systems 11 April 2020” document.

➢ Protecting Ground Water

The site conditions and layout shall determine the feasible measures to be put in place to protect the groundwater from contamination and equipment from theft and damage.

The following guidelines shall be followed when determining the feasibility of protecting the borehole:

• The borehole and pump must be protected in a concrete rings and with a lockable
manhole for inspections and to do Maintenance to the pump installation.

- The SOLAR installation should be protected with razor wire to prevent theft.
- The Tank stand with 1 X 10000 l tanks should be protected with razor wire to prevent theft.
- SOLAR electrical equipment must be in a steel lockable box, secured to the ground and should be protected with razor wire to prevent theft.

➢ Equipping

✓ Borehole

- The borehole collar is to be below ground surface.
- A section of steel casing with a lockable cap should be installed around the borehole collar
- The Borehole shall be fitted with a Flow meter
- All Boreholes shall be fitted with a conduit pipe to facilitate monitoring of groundwater test levels.
- Borehole shall be disinfected where the water chemical analysis recommends action.
- A Borehole cap shall be used to seal the borehole.
- The site at each borehole is to be cleaned after completion of the borehole.

✓ Submersible pump

Submersible borehole pump complete with steel manhole cover.

✓ Pump Size

*The pump will be determined as per 4 above*

✓ Storage

- 1 x 10 000 litres Water tank
- 1 x 4.5 m high steel stand. All steel members to be painted with standard primer and oil paint application for water structures.

✓ Water pipework and standpipes
The water stand with the 1X 10000 l tanks will not be more than 50 m from the borehole. The outlet of the tanks will be connected. Excavation in all materials for trenches for up to including 75 mm nominal diameter pipes and smaller, up to 1 m deep. Pipes and cables to have a minimum cover of 800 mm. Relevant pipes should be DN Class 9 and 25 DN Class 9. For the two Standpipes, the two-standpipe installation, complete with in-situ constructed concrete trough. Rates include backfill, compact and disposal of surplus and unsuitable material. All the necessary pipework, connections, standpipes and ancillary works shall be implemented by the contractor even when they are not expressly mentioned in the BOQ.

✅ Electrical Power Supply

It is expected that the current electricity supply will be from solar panels. The sizing of the solar panel installation will also be dependent on the borehole pump size and related electrical system needs. The SOLAR panels must be installed on a stand and secured against theft.

✅ Commissioning

- Once the borehole is completed and functional, commissioning must be done on site with representatives of the respective Local Municipality and MISA.
- If the MISA and the Local Municipality is satisfied with the operations of the installed borehole, the final payment will be authorized.

Where

- \( x \) is the imported content in Rand
- \( y \) is the bid price in Rand excluding value added tax (VAT)

Prices referred to in the determination of \( x \) must be converted to Rand (ZAR) by using the exchange rate published by South African Reserve Bank (SARB) at 12:00 on the date of advertisement of the bid as indicated in paragraph 4.1 below.

CERTIFICATE OF INDEPENDENT BID DETERMINATION

1. This Standard Bidding Document (SBD) must form part of all bids¹ invited.

2. Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a pe se prohibition meaning that it cannot be justified under any grounds.

3. Treasury Regulation 16A9 prescribes that accounting officers and accounting authorities must take all reasonable steps to prevent abuse of the supply chain management system and authorizes accounting officers and accounting authorities to:
   a. disregard the bid of any bidder if that bidder, or any of its directors have abused the institution’s supply chain management system and or committed fraud or any other improper conduct in relation to such system.
   b. cancel a contract awarded to a supplier of goods and services if the supplier committed any corrupt or fraudulent act during the bidding process or the execution of that contract.

4. This SBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.

5. In order to give effect to the above, the attached Certificate of Bid Determination (SBD 9) must be completed and submitted with the bid:

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.
