27.3.1 The Third stage of evaluation of the Bids will be in respect of price and preferential procurement only. Points will be allocated to Bidders at this stage of the evaluation in accordance with the PPPFA and the PPPFA Regulations, as follows:

Price points 80

Preferential procurement points 20

27.3.2 Price points

The following formula will be used to calculate the points for price:

$$P_s = 80(1 - (P_t - P_{min}) / P_{min})$$

Where:

P_s = Points scored for comparative price of tender or offer under consideration;

P_t = Comparative price of tender or offer under consideration; and

P_{min} = Comparative price of lowest acceptable tender or offer.

27.3.3 Preferential procurement points

A maximum of 20 points may be awarded in respect of preferential procurement, which points must be awarded to a tenderer for attaining their B-BBEE Status Level in accordance with the table below:

B-BBEE Status Level	Number of Points
1	20
2	18
3	14
4	12
5	8
6	6
7	4
8	2
Non-compliant contributor	0

An unincorporated trust, consortium or joint venture will qualify for points for their B-BBEE status level as an unincorporated entity, provided that the entity submits their consolidated B-BBEE scorecard as if they were a group

structure and that such a consolidated B-BBEE scorecard is prepared for every separate Bid.

27.3.4 Total

The total points scored by each Bidder will be calculated by adding the points scored for price (out of 80) to the points scored for preferential procurement (out of 20).

The successful Bidder will be the Bidder which has the highest total points (out of 100) for both price and preferential procurement (unless there is a basis for selecting a different successful Bidder in accordance with section 2(1)(f) of the PPPFA).

NB: Bidders are required to submit, as Annexure J to their Bids, any documentation which supports the responses provided in respect of the Eligibility Criteria below.

PART E

TERMS OF REFERENCE

1. INTRODUCTION

In recognition of the magnitude and severity of the COVID-19 outbreak which has been declared a global pandemic by the World Health Organisation (WHO), Cabinet in its special Cabinet meeting held on 15 March 2020 resolved to declare a national state of disaster. In this regard, the minister of COGTA issued a gazette declaring a State of disaster, in terms of Section 27 of the Disaster Management Act, 2002.

Further, the President of the Republic of South Africa addressed the nation and announced extra ordinary measures to be implemented to mitigate and combat the spread of Covid-19.

The Local Government sphere is at the coalface of the impact of Covid-19 and in this regard a Sectoral Local Government Programme is proposed covering those critical areas that municipalities can contribute in to contain and reverse the spread of the pandemic.

The Department of Cooperative Governance, and Water and Sanitation worked together to identify short comings in the hotspots areas to break the Covid -19 pandemic chain. The proposed interventions focus on the provision of basic services, water services infrastructure, i.e. water supply, sanitation, hygiene awareness and electricity.

The DBSA has responded to the national call to assist Government to deliver services to the most disadvantaged communities during these trying times.

2. BACKGROUND

On 29 April 2020, the IDKC approved an amount of R41,44 million for the DBSA to support COGTA to combat the spread of the COVID-19 pandemic.

The support entails the provision of water services that include drilling of boreholes, water tankering, water tankers, water storage facilities and provision of electricity for boreholes in accordance with the attached list of projects.

In accordance with the DBSA's COVID-19 interventions, the collaboration with MISA entailed the provision of "Water, Sanitation and Hygiene Interventions" to various identified Municipalities. In this regard, the identified projects were categorised into sub-programmes, where separate procurement processes were undertaken for each sub-programme. The Request for Proposals (RFP) entailed the procurement of service providers for the Supply, Delivery and Repairs of Boreholes and Pumps, where the scope of works was as follows: "Drill new Borehole equip with solar powered system, and equip with submersible pump, provide storage reservoir and standpipes. The procurement process for this RFP has since been concluded. Subsequent to the SCMC approval, the DBSA appointed a Service Providers on 25 June 2020 with various Contract Values

The initial scope of work allowed for the drilling and equipping of boreholes and the testing of the water quality to ensure compliance with SANS 241 drinking water quality standards. However, there was no provision on the Bill of Quantities (BoQ) for remedial processes should the water be found not to be suitable for domestic uses and human consumption. On testing

of the water, it was found to be unfit for human consumption as such the water requires pre-treatment to meet the minimum drinking water quality standards.

The following municipalities have been affected:

Greater Letaba Local Municipality – Sekgopo-Malatji, Sekgopo-Merakong, Vaalwater, Mollong, Maphale & Ramathiti

3. OBJECTIVE

To source a service provider for the supplying and installation of the Packaged Water Purification technology to treat the borehole water to meet the required SANS 241 (2015) of portable water.

4. TIME FRAME

It is expected that the timelines for this programme will be dependent on the type of intervention to be undertaken in the implementation of the water treatment system interventions identified. The project duration is estimated to be 3 months.

5. SCOPE OF WORKS (SOW)

The scope below is high level, the PSP will be required to submit a detailed proposal with a scope that will be able to address the challenge as per the water quality results and successfully treat the water to an acceptable potable water standard according to SANS 241-1:2015.

- a) Water quality testing.
- b) Detailed water analysis report with recommendations.
- c) Supply, installation and commissioning of the required water treatment system.
- d) Fencing of the treatment system using high density invisible fence.

Note that current water samples quality results are attached as Annexure A for your reference and pricing.

6. PROJECT IMPLEMENTATION & MONITORING PRINCIPLES

The implementation of the above interventions will happen through a series of activities namely:

- **Construction Phase:**
 - Photo of the project constructions stages before, during and after construction must be submitted to DBSA.
 - Sites visits and meeting will be conducted
- **Electricity Services:**

- Eskom representative must sign off the scope and completion certificates.

- **Completion:**

- Final scope and completion certificates must be signed off by Municipal rep, Ward councilor and Traditional leader.
- Submission of operating and Maintenance manuals

7. KEY DELIVERABLES

Supply and installation of 6 water treatment facilities as per SANS 241-1:2015.

8. THE SERVICE PROVIDER TEAM

The expertise required to successfully implement the different scope of works including water analysis, water treatment system supply & installation and plant fencing.

9. PACKAGED WATER PURIFICATION SYSTEM

9.1. Compliance of Water Quality

Groundwater samples will be taken during from each borehole and the submitted to an approved water testing laboratory results will be provided to the supplier of the Packaged Water Purification System, to provide the technology to treat the borehole water to SANS 241 (2015) standards (Table 1)

Tested results can exceed the SANS 241 (2015) Drinking Water Standards for one or more of the following determinants:

- **Microbiological determinant**
- **E. coli.:** The presence of faecal coliforms is indicative of faecal contamination;
- **Total coliforms:** The presence of total coliforms is also indicative of faecal contamination.
- **Physical and aesthetic determinants**
- **Colour:** Elevated colour is commonly associated with elevated turbidity;
- **Conductivity:** Elevated conductivity is usually due to chemical parameters associated with the rock formation;
- **Turbidity:** Elevated turbidity is common in groundwater. It may be caused by organic matter such as organisms occurring naturally in the groundwater and can be an

indicator of microbiological contamination. Elevated turbidity together with detection of total coliforms indicates that microbial compounds are contributing to turbidity;

- **Chemical determinants**
- **Nitrate:** Elevated nitrate can be caused by sewage, fertilisers and erosion of natural deposits;
- **Fluoride:** Elevated fluoride is common in areas of volcanic rock; and
- **Chloride:** Elevated chloride is generally associated with elevated electrical conductivity and is usually due to chemical parameters associated with the rock formation
- **Sodium:** Elevated sodium is generally associated with elevated electrical conductivity and is usually due to chemical parameters associated with the rock formation;
- **Iron:** It is common in groundwater for iron to be marginally elevated. This is due to chemical parameters associated with the rock formation.
- **Manganese:** It is also common in groundwater for manganese to be marginally elevated. This is due to chemical parameters associated with the rock formation

In order to mitigate the threat posed by the contaminants that exceeded the SANS241 (2015) Drinking Water Standards within a borehole, a purification system are required and should be installed. The recommended purification systems must have the following characteristics:

- A product that “doses” chlorine into the water of a holding tank, i.e. the tank that the borehole feeds. Chlorine will kill living organisms such as bacteria and parasites.
- A dual filter comprising of filter-sand and granular activated carbon (GAC). The bottom strainer should be covered with gravel to ease flow. GAC will also remove organic toxic substances and odours from water.

A reverse osmosis system which will remove dissolved solids (salts). Suspended solids such as mud, rust and silt are removed by sediment filters. The system must have two x one-micron sediment filters to remove turbidity to <1 NTU (Nephelometric Turbidity Units). The dissolved salts (TDS – Total Dissolved Salts) which are in ionised form are too small to be removed by sediment filters. The system must employ a membrane. The pores of the membrane must be 0.0001 micron in diameter which are 1/10 000 000 (one ten millionth) of a millimetre, which will make them small enough to reject dissolved salts. These rejected salts flow away as waste, while the purified water is stored in a separate tank.

- a) The borehole collar is to be below ground surface.
- b) A section of steel casing with a lockable cap should be installed around the borehole collar

In the case of no ESKOM electrical supply available, a solar (Sun Electricity) supply system to provide the recommended purification systems with sustainable energy to run for at least 12 hours.

Training must be provided to the Municipality to ensure that the Municipality have the skills to operate the recommended purification systems.

After installation of the purification systems, samples must be retaken to monitor the exceedants and risk exposure and for the supplier to proof that the purification system meets the standards.

CERTIFICATE OF INDEPENDENT BID DETERMINATION

- 1 This Standard Bidding Document (SBD) must form part of all bids¹ invited.
- 2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
- 3 Treasury Regulation 16A9 prescribes that accounting officers and accounting authorities must take all reasonable steps to prevent abuse of the supply chain management system and authorizes accounting officers and accounting authorities to:
 - a. disregard the bid of any bidder if that bidder, or any of its directors have abused the institution's supply chain management system and or committed fraud or any other improper conduct in relation to such system.
 - b. cancel a contract awarded to a supplier of goods and services if the supplier committed any corrupt or fraudulent act during the bidding process or the execution of that contract.
- 4 This SBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
- 5 In order to give effect to the above, the attached Certificate of Bid Determination (SBD 9) must be completed and submitted with the bid:

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.
