DBSA TERMS OF REFERENCE (TOR)

**REQUEST FOR PROPOSAL: SOURCING OF SERVICE PROVIDER TO
DEVELOP A SUSTAINABILITY & ESG FRAMEWORK & TOOLKIT FOR
DBSA MUNICIPALITIES**

APRIL 2025

1. CONTEXT

The Development Bank of Southern Africa (“the Bank”) is a Development Finance Institution (“DFI”) wholly owned by the Government of the Republic of South Africa (“the Shareholder”). The DBSA has its primary purpose firmly rooted in stimulating socioeconomic growth, given its infrastructure and capacity development mandate. This includes infrastructure finance and development, human resource development, and institutional capacity building. The Bank has sought to promote economic and social development by mobilising financial and other resources from the national and international, private, and public sectors, for sustainable development projects in South Africa, the Southern African Development Community (“SADC”) region and the whole of the African continent. In addition, the DBSA partners with financial and development institutions to implement its infrastructure finance mandate on the African continent. The DBSA is a Global Environment Fund (“GEF”) and the Green Climate Change Fund (“GCF”) project implementing agent.

The DBSA operates within the South African Constitutional legislative and policy mandate, the 2030 Agenda for Sustainable Development and the Sustainable Development Goals (“SDGs”) and Paris Accord Principles. In broad and aspirational terms, the Bank has the vision of a prosperous and integrated resource-efficient region, progressively free of poverty and dependency.

The Bank is committed to embedding comprehensive sustainability and environmental, social, and governance (“ESG”) principles and guidelines in its decision-making processes. We see the integration of Sustainability and ESG into investments as a responsible investment practice which leads to the generation of positive outcomes for public and private sector practices. The SDGs encourage DFI’s to promote sustainable infrastructure responses to priority societal needs in a transparent and accountable manner. The King IV Report on Corporate Governance for South Africa (King IV) provides guidelines and recommendations on public and private sector reporting on the way in which they conduct business and make profits. As part of this commitment, we seek to enhance our Sustainability and ESG framework and integration into investments, with a particular focus on local governments recognising the need for a customized approach for the municipal asset class. The local government sector is an area of investment where the DBSA holds extensive expertise, having worked with all three sectors of local government i.e., metros, secondary and under-resourced municipalities. Municipalities play a crucial role in the economic activity of each region and infrastructure is key to unlocking this. Millions of residents benefit from the development and maintenance of basic household infrastructure such as water, sanitation, electricity, roads and human settlements, as well as community services. The DBSA

adopted the Integrated Municipal Approach (“IMA”) as the strategy position to be pursued on municipalities. This approach seeks to, among others:

- Partner and support specific districts
- Utilise the development subsidy to enable IDD to unlock municipal projects
- Implement frontloading of municipal grant
- Pursue project finance type opportunities, e.g., EGIP, Water Partnership Office, etc
- Pursue opportunities in the municipal water sector

The Approach is implemented through the Partner-A-District (PaD) platform which aims to invest in critical infrastructure, deliver and manage infrastructure, strengthen governance and the institutional architecture of municipalities and support local economic development. More information on DBSA’s investment and contribution to local government can be found on the DBSA website: Focus Areas > Local Government Support.

The DBSA acknowledges that understanding the evolving Sustainability and ESG landscape in the South African municipal asset class is critical for several reasons:

- Sustainable development: ESG factors are essential for informed policymaking that supports long-term economic growth, social well-being, and environmental protection. Sustainability and ESG considerations attract responsible investment, contributing to economic growth and job creation.
- Environmental: Addressing issues like climate change and resource depletion requires policies promoting sustainable practices. The DBSA recognizes that to deliver on the objectives of Paris Agreement “holding the increase in the global average temperature to well below 2°C above pre-industrial levels, and to pursue efforts to limit the temperature increase to 1.5°C above pre- industrial levels” and South Africa’s Just Energy Transition (“JET”), municipalities will need to take transformational action to reduce transportation emissions, improve building energy efficiency, increase the supply of green energy, and change consumption patterns, while strengthening the ability to deal with the impacts of climate change through adaptation.
- Social welfare and inclusion: Policymakers need to respond to social challenges such as poverty, inequality, and unemployment to improve citizens quality of life.
- Good governance and accountability: Enhancing transparency, combating corruption, and strengthening institutions build public trust and ensure efficient public sector operations. This also attracts investors to the public sector.

As a result, it is important for the DBSA to have a bespoke Sustainability and ESG framework and toolkit for municipalities to be used in its investment decision making at multiple points including pre-investment screening, due diligence and post-investment portfolio monitoring. The Sustainability and ESG framework and toolkit is expected to assist in managing Sustainability and ESG investment risk and pricing, such as climate change risk, when the risk cannot be easily addressed – for example, municipalities in areas that are expected to be significantly affected by sea level rise would not be able to avoid the costs associated with repairing damaged infrastructure. The framework and tool should also be able assist with managing greenwashing risks around use of proceeds, data availability (ESG data is not widely disseminated), and data quality and comparability. Lastly, the bespoke framework and tool should assist the Bank in understanding where ESG data gaps in municipalities exist so targeted interventions can take place (e.g. where it is found that a municipality does not have a Disaster Management Plan, or a Climate Change Strategy, or where the municipality does not have resourcing (technical) capabilities/ capacity).

2. PURPOSE AND SCOPE
